The Global Wellness Institute (GWI) defines wellness as “the active pursuit of activities, choices and lifestyles that lead to a state of holistic health.”¹ The GWI also notes that while wellness is an individual endeavor - wherein each person has personal responsibility for their respective choices, behaviors, and lifestyles - it can also be notably influenced by social determinants.

Individuals often confuse or use the words health, wellness, well-being, and happiness interchangeably. The GWI observes, “While there are common elements among them, wellness is distinguished by not referring to a static state of being (i.e., being happy, in good health, or a state of well-being). Rather, wellness is associated with an active process of being aware and making choices that lead toward an outcome of optimal holistic health and wellbeing.”²

Further, wellness is more than just about physical or mental health; it can incorporate anywhere from 6-12 interrelated and interdependent dimensions. Because it better reflects the holistic nature and complexity of students’ lives, Georgia Tech incorporates the eight-dimension model advanced by the Substance Abuse and Mental Health Services Administration (SAMHSA) in the US Department of Health & Human Services, which includes emotional, environmental, financial, intellectual, occupational (or career), physical, social, and spiritual dimensions.³

While there are varying ways to describe each dimension, below are brief definitions adapted from work conducted by the GWI, SAMHSA and the University of Maryland at College Park:

- **Emotional** – Coping effectively with life stressors, having self-esteem, and expressing optimism, as well as being aware of our feelings, accepting the full range of feelings, expressing our feelings appropriately, and understanding the feelings of others;
- **Environmental** – Honoring the interdependent, dynamic relationship we have with our environment - whether social, natural, built or digital – and our responsibility for sustaining it; occupying pleasant, nurturing, safe and stimulating environments;
- **Financial** – Having basic needs met and a positive relationship with money, applying resource management skills to live within one’s means, making informed financial decisions, setting realistic financial goals, and preparing for short- and long-term needs or emergencies;
- **Intellectual** – Finding ways to engage in lifelong learning, expand knowledge and skills, and interact with the world through problem-solving, experimentation and curiosity, as well as the ability to think critically, reason objectively and explore new ideas;

² Ibid.
• **Occupational (or career)** – Getting personal satisfaction and enrichment from work, hobbies and volunteer efforts, that are consistent with one’s values, goals and lifestyle, as well as taking a thoughtful and proactive approach to career planning and growth;

• **Physical** – Replenishing the body through physical activity, exercise, sleep, and nutrition; engaging in low-risk alcohol, tobacco and other drug use; conducting routine health exams/screenings; and adopting preventive measures such as vaccines and condom use;

• **Social** – Connecting and engaging with others and our communities in meaningful ways, having a well-developed support system, being interculturally competent, and feeling a sense of belonging; and

• **Spiritual** – Includes searching for and/or having a sense of purposeful existence and meaning in life, as well as seeking harmony with the universe, extending compassion towards others, practicing gratitude, and engaging in self-reflection.4, 5, 6, 7
